Bruno Costanzo

Senior Full-Stack Engineer · Ruby on Rails

Zürich, Switzerland · Italian / Argentine citizen · Blog · LinkedIn · GitHub · dev.bcostanzo@gmail.com

ABOUT ME

Senior full-stack engineer with 6+ years building and shipping production Ruby on Rails systems for clients across Europe, the US, and Latin America. I own the full technical lifecycle — architecture, scoping, delivery, and maintenance — and have led small teams (2–3 engineers) on platforms spanning identity management, large-scale data synchronization, and cloud infrastructure. Creator and maintainer of Fripa, an open-source Ruby gem used in production.

Languages: Spanish (native) · English (fluent) · Italian (B2)

EXPERIENCE

Full-Stack Engineer · Renuo AG Zürich · Jul 2025 – Present

Lead engineer on Portal, a platform for the University of Bern (FpBe) that provisions and manages secure research environments — Linux VMs, identity, and browser-based access — for academic and clinical users.

- Lead a team of 3 engineers, owning architecture decisions, technical scoping, and refinement of product requirements into delivery-ready specs.
- Designed an encrypted data-import flow (HashiCorp Vault, FreeIPA, S3, rclone) using envelope encryption (DEK/KEK) to protect sensitive research data.
- Integrated Apache Guacamole with FreeIPA for browser-based VM access, removing the need for users to manage SSH keys.
- Built service interfaces to OpenStack (VM lifecycle), Keycloak (SSO), and GitLab CI/CD; split Portal from a dedicated Gateway service with contract testing between repos.
- Authored the team's Claude Code best-practices guide and apply TDD and spec-driven development across all features, including AI-driven flows.

Stack: Ruby on Rails · PostgreSQL · OpenStack · FreeIPA · Keycloak · HashiCorp Vault · Apache Guacamole · Podman · GitLab CI/CD

Full-Stack Engineer · Unagi (Software Consultancy) Remote · 2022 – 2025

Embedded technical lead across multiple client engagements:

- **Sayge** (HR/coaching SaaS, USA · 2024–2025): Led 2 engineers; upgraded Rails to the latest major version and raised test coverage to 95%, cutting regressions and enabling confident refactors. Shipped custom dashboards for coaches and stakeholders.
- **Blackbook Travels** (B2B travel, Singapore · 2023–2024): Built the Inventory Refresh module syncing 2M+ hotels from multiple providers, with idempotent, retry-safe async workflows (Sidekiq).
- **Patrimore** (personal finance, Chile · 2022–2023): Designed and shipped the Investment Module — goal-oriented wallets for purchasing financial-asset packages.
- **Doff** (internal HR, Argentina · 2023): Built a Rails app from scratch for employee leave and time-off, with flexible policy configuration and reporting.

Full-Stack Developer · Smart One Colombia · 2020 – 2022

- Built driver/rider matching and trip-lifecycle services for a ride-hailing platform, plus a driver panic button with real-time geolocation streaming to an admin control dashboard.

OPEN SOURCE

Fripa (renuo/fripa) — Ruby gem for FreeIPA identity management. Author and maintainer.

SELECTED SIDE PROJECTS

- **aplai.work** (2026) — Web app to track job searches, application status, and role-specific notes.
- **Office Hours for Self-Learners** (2026 – present) — Regular mentoring for self-taught Argentine developers on technical and career decisions.

CONTINUOUS LEARNING

Rust via CodeCrafters (Redis, Git, shell from scratch) · AI-assisted development (Claude Code, MCP servers, spec-driven) · distributed systems and Ruby internals.

EDUCATION

BA in Political Journalism — TEA (Taller Escuela Agencia), Buenos Aires · 2015–2018
